Addressing the Human Risk

PhishScout
Automated Phishing Incident Response

Analyze, Quarantine & Delete Suspicious emails in seconds using 130+ built-in threat intelligence feeds

Domain Reputation · Attachment Scanning · Site Verification · IP Reputation · URL Scanning

PhishScout is an automated phishing defense & orchestrated response solution that allows the IT security teams to instantly investigate suspicious emails with the ability to quarantine and ultimately delete phishing emails from the end user's mail box.

It has built-in integration with 130+ threat intelligence feeds & databases to instantly thwart a phishing attack. The automated & orchestrated response workflow ensures role-based coordination between relevant stakeholders to report, analyze, quarantine and delete phishing emails from the end user's mailbox in the shortest possible time.

PhishRod provides a reporter plug-in that works as an agent for all mail clients. While the mailbox synchronizes to receive any incoming email, the end user is provided with a warning that the email is coming from a malicious source.

- ■ **Domain Reputation**
- ■ **Attachment Scanning**
- ■ **URL Scanning**
- ■ **Site Verification**
- ■ **IP Reputation**
- ■ **Email Verification**

Once reported, PhishScout extracts the links & attachments from the reported suspicious email and automatically logs an incident. The primary analyst can then conduct IP Reputation Analysis, Domain Reputation Scanning, URL Scanning, Site Verification, Email Verification, and Attachment Scanning using 130+ intelligence feeds.

Based on the results received, the primary analyst can immediately quarantine the reported email and escalate the case for secondary analysis. Based on the feedback from the secondary analyst, the email can be deleted from all end user mailboxes immediately.
